

ANNUAL E-GOVERNANCE REPORT 2018-2023

E-governance improves the efficiency and increases the productivity of the institution. We use different applications/software for Administration, Finance and Accounts, Student Admission and Support, and Examination.

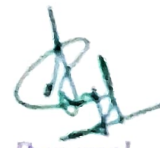

Administration: We use Octopod (Student Ink) DHI (ERP) and Easylib software for administrative activities. It helps College office clerks deal with different types of documentation work such as students' admission process, generating different payment receipts, issuing library books, etc.

Finance and Accounts: We have 'Tally Prime Gold' software for conducting all the operational activities of the finance and accounts section of the administration office.

Student Admission and Support: The admission committee handles all admission-related work per the prescribed norms. We ensure fair and transparent admission by following the reservation policies of the government of Karnataka. Therefore, the student's insertion process at college is systematic and on par with the University norms. The admission procedure is computerized through Octopod (Student Ink) software.

Examination: An examination committee is formed to plan and conduct examination-related activities throughout the year. All examinations are held as per the circular given by the University. We use DHI software to conduct internal assessments. The institution follows a computerized timetable issued by the University and the results are published and received by the University through the VTU portal.

The Chairman, Head of the Governing Council approved the above report.
